ICY Accommodation Management

ICY Accommodation Management

ICY

Are you a manager at a holiday park and do you want to save energy and keep a grip on your accommodations? Then ICY Accommodation Management is the solution for you. With this wireless management system for holiday parks you can wirelessly control and read various equipment from the reception or via your smartphone.

- Comfort for your guest and savings for you
- Control accommodations wirelessly
- No change in infrastructure
- Fast response to issues

Transceiver, frost and power outage alarm

A transmitter/receiver that forms the communication link between the separate accommodations and the devices in the accommodation. The Transceiver is also fitted with a frost alarm.

Smoke or heat detector

ICY is supplier of several smoke and heat detectors that can be connected with each other wirelessly. Fire alarms are sent to ICY Accommodation Management, so you can respond quickly.

ROI of less than
2 years*

Coloured icons show the status of the accommodations. Alarms become visible and are sent by text message or e-mail.

Pressure sensor

The pressure sensor guards the water pressure in a central heating installation. This sensor can be connected to a Transceiver so a pressure alarm can be sent to reception or maintenance as soon as the pressure falls below 0.8 Bar.

Timer Thermostat

An energy saving thermostat that can be set remotely. Presence detection on the thermostat ensures that the accommodation is never heated unnecessarily. This ensures energy savings of 26% on average.

Energy meter reading

By using pulse loggers in conjunction with the energy meters, you can get a complete overview of all meter readings with one push of the button in ICY Accommodation Management. This also applies to smart meters.

Intruder Alert

In case of burglary the Intruder Alert sends an alarm to ICY Accommodation Management. This alarm can be forwarded to the cellphone of the guard on duty.

* Our lengthy experience tells us that our energy saving products generally have a return on investment of 2 years.
